

## Automotive Networks - CAN

Networking control modules in vehicles has been used by manufacturers since the 80's, but it's only recently that technicians have had to learn more about these systems due to software procedures and hardware faults.

The software behind the networking is quite complex for an automotive technician, so this seminar is focused on educating the technician about how it works at a technician level and what you can do in relation to diagnosing faults within a network.

- » **Learn how CAN shares information over a network**
- » **See how various networks are connected throughout a vehicle**
- » **Use genuine diagnostic procedures to locate faults**
